

FLEXIBILITY AND PERFORMANCE.

TRENCOR
by ASTEC

The **Trenchor Roadminer®** provides a clean, even cut eliminating the need to drill and blast, removing safety, noise and liability issues associated with blasting. All Roadminer® models offer both a down cutting method for softer rock and up cutting method for harder rock applications. There is no need for primary crushers, and if required, all Roadminer models can be converted from mining to a trenching application in less than four hours.
